Artificial Plant Brochure 2014/15

# Artificial Plants

**Livingreen Design is famous for cutting edge design and quality products. Here we bring our expertise to replica plants, creating a section that is both unique in the marketplace and manufactured to the highest standards.**

We know that availability of stock is of crucial importance and we reflect this by offering a relatively small selection, the vast majority of which is hand built by ourselves to order. We may not have all the items in stock for immediate dispatch but our lead time of 2 -3 weeks for almost anything in the catalogue is exactly in line with our planter manufacturing lead times. This allows us to dispatch all products at the same time so saving on delivery costs or you can choose our **Pre-planted Service** where we supply your plants and planters fully planted up and ready to install – we can

even deliver to your customers premises using your own delivery notes.

With the focus on quality and innovation we are particularly proud of our Flowerbombe and Green Fantasy ranges which are built to order on natural stems, either straight singles or interesting multi branched. There is no attempt to pass these off as 'real' plants, rather they are fantastical, imaginary, and amazing.

Looking at the market for buxus hedging in planters for restaurants and hotels in particular we examined the construction methods and thought we could do better. We have now developed a method of building complete hedging/planter units of any size and length using 100% grp with stainless steel fixings. The result is a beautifully finished scheme which will last indefinitely and can easily be repaired on or off site.

For the Greenwall market we have developed our own solution, Feature Wall. Again a completely unique product, Feature wall allows you to build a replica wall in rainforest or fantasy styles and intermingle this with logos, shelves, artwork, photographs and any number or style of contoured panel to create an extraordinary wall decoration unlike anything else on the market. See our separate Feature Wall brochure for more information.

We will be adding to the selection in the coming months so please keep an eye on our website and call us to discuss any artificial plant projects you have as we are able to source and supply many other products not listed here, often with short notice.

# Flowerbombe

**Like something from Alice in Wonderland, Flowerbombe is a fantasy in colour, a riot of imagination.**

Using small multi-flowered foliage, we have created extravagant new 'plants' in topiary shapes. Why have a boxwood ball when you can one covered in purple, white, orange or yellow flowers? Using natural straight and multi branched stems these are also available as single or multi balled specimen plants up to 1.8m or cones up to 2.1m. Single balls come as standard from 35cm up to 85cm diameter with larger available to special order.

Flowerbombe can also be used to create logos, and to create other alternative sizes and shapes.

# Flowerbombe Range

NAME	SIZE (D) or (DxH)	DESCRIPTION
<b>3/4 BALL</b>	01 - 35 02 - 45 03 - 60 04 - 85

# Buxus Barriers

While most hedging is constructed using some combination of wire and wood framing and latterly attached to a planter we have taken a different approach. Our hedging/planter combination units are 100% glassfibre with stainless steel pinning, meaning there is nothing to break or rot off.

The hedge units are fully demountable from the bases to allow weighting or attachment of the planters to a sill or floor; or for ease of removal for servicing. We can make them in any length and any combination or hedge and planter height – including no planter at all. As well as hedges we can make cubes, cones, cylinders, and pyramids in any size using the same methods. Curves are also easily achieved, making the most ambitious of designs a reality for the first time at a reasonable cost. So don't be afraid to break the mould – we love to make the impossible, possible.

# Green Fantasy

Like its sister range, FlowerBombe, Green Fantasy bears no relation to real plants, but is the better for it.

Who can resist a tree made from grass balls or a black Eucalyptus cone? Ferns, pine, succulents and cacti can all be made as topiary shapes bring a new dimension to replica specimen plants. All on quality natural wood stems.

# Other Ranges

Covering all the popular lines and sizes, plus a great selection of cacti and succulents, our remaining selection has been chosen for outstanding realism. Featuring gnarled old olive trunks, fruiting oranges and thick burgundy bamboo canes, this is as close to nature as it gets. While croton and aglaonema foliage are facsimiles of their originals to be all but indistinguishable. We think you will find everything you need here but please contact us for other options.

# Feature Wall

## Feature Wall from Livingreen Design is quite simply a new concept in wall decoration.

This innovative modular panel system allows you to specify and build a unique wall that can be a complex or simple as required. Plain, single or multicolour panels can be interspersed with a multitude of other designs including 3D contours, logos, artwork or pictures, shelves and a variety of live and artificial planting.

Use Feature Wall to create a beautiful replica green wall featuring patterns,

colours, textures in formal or rainforest format. If you want real plants then Feature Wall has modules for that too, allowing you to put in as many or as few as required, from a full green wall to a single planted panel.

But the beauty of the system is to mix and match to create the perfect solution for every situation. Use it in receptions to bring alive a company logo. Replace tired artworks with multi-dimensional displays blending colour, form, visuals and plants. Match panel finishes and colours to plant containers, unifying the interior design.

As Feature Wall panels are hung like pictures, they can be demounted in seconds, rearranged into a different format and panels swapped allowing seasonal colour schemes, Christmas displays or artwork changes.

From a single panel to a full wall covering and everything in between, Feature Wall offers the ultimate in flexible design – you can even design your own panels as everything is manufactured and finished here in the UK using advanced composite technology for the ultimate in lightness and strength.
